

Using the linux terminal generate a file structure which looks like this.

Write all commands you use in a separate file using LibreOffice Writer.

```
Desktop ----- CP ---- Cities
      |           |
      |           ----- Streets
      |
      ----- Villages
      |
      ----- Towns
```

In the directory Towns generate a file Piran.txt.

Create a file Kettejeva_ulica.txt in the directory Desktop and **move** it to the directory Streets.

Create a file Korte.txt in the directory Desktop and **copy** it to the directory Villages.

Directory Cities and everything in it can be accessed (read and execute!) to everybody.

Directories Villages and Towns are only accessible (all permissions) to the owner.
